*"Dragonship" 3D Model*

"DragonShip" 3D Model ~ Gabriel Williams ~ 2008

The pulley system, wings, rudder, and skeletal structure are planned to be fully operation in a final version, once implemented into the Unreal 3 engine.

Of special note, the rigging would be such that a clever pilot would be able to draw hard on the "reigns" and tuck the wings close to the hull, forcing a sudden screaming plummet towards the ground to dive-bomb or escape an enemy—followed by, just before impact, allowing the wings to snap back outward, and, hopefully, swoop thunderously back into the clouds.
